WPF基础语法

Lable演示

TextBlock演示

```
<!--
    1.TextBlock 设置的text内容 如果标签里面有文本内容 会将其加到text内容后面
    2.如果想进行换行操作 可以在Textblock双标签里面 加上LineBreak标签
    在之后的内容就会换行
    -->
    <TextBlock Text="我是个TextBlock33" FontSize="30" FontWeight="Light"
Foreground="Red">
        我是文本一<LineBreak/>
        我是文本二<LineBreak/>
        我是文本三<Colored
        </TextBlock>
```

Button演示

```
<Button Width="100" Height="30"
    HorizontalAlignment="Left"
    VerticalAlignment="Top"
    Content="我是个按钮"
    Margin="20,20,0,0"
    Background="Orange"
    Foreground="White"
    BorderThickness="5,0,10,0"
    BorderBrush="Transparent"
</pre>
```

```
Click="Button_Click_1"
MouseMove="Button_MouseMove"
/>
```

Border演示

```
<!--
    BorderThickness边框宽度默认为0 直接设置一个参数 代表的是四周宽度
   BorderThickness 有四个参数时 分别代表左边 上边 右边 下边
   我们设置边框颜色加上边框宽度 才能准确显示边框的效果
   如果我们需要设置角的弧度 需要使用CornerRadius属性
-->
   <Border Width="200" Height="80" Background="LightBlue"
       BorderBrush="Red" BorderThickness="1,1,2,1" CornerRadius="15">
       <!--<Label HorizontalAlignment="Center" VerticalAlignment="Center"
       FontSize="20" Foreground="White">我是label1</Label>-->
       <Button Background="Transparent"</pre>
           FontSize="20"
           Foreground="White"
           Content="我是个按钮"
           Click="Button Click"
           BorderBrush="Transparent">
       </Button>
       <!--
       <Grid>
           <Label</pre>
               FontSize="20" Foreground="White">
               我是label1
           </Label>
           <Label HorizontalAlignment="Center"</pre>
               VerticalAlignment="Center"
               FontSize="20" Foreground="White">
               我是label2
           </Label>
       </Grid>-->
   </Border>
```

RadioButton演示

```
<!--
    radioButton 如果需要实现分组的效果
    1. 使用布局容器来嵌套 (如grid /stackPanel等等)
    2. 可以使用groupName进行区分 分组
-->
<RadioButton Content="男"</pre>
```

```
GroupName="sex"
        Margin="10,100"
        FontSize="20"
        Foreground="red"
        VerticalAlignment="Top"
        HorizontalAlignment="Left" ></RadioButton>
<RadioButton Content="女"
       GroupName="sex"
       Margin="80,100"
        FontSize="20"
        Foreground="red"
       VerticalAlignment="Top"
        HorizontalAlignment="Left" ></RadioButton>
<RadioButton Content="语文"
       GroupName="course"
        FontSize="20"
        Foreground="Blue"
       VerticalAlignment="Top"
       HorizontalAlignment="Left" ></RadioButton>
<RadioButton Content="数学"
        GroupName="course"
       Margin="70,0"
       FontSize="20"
     Foreground="Blue"
       VerticalAlignment="Top"
       HorizontalAlignment="Left" ></RadioButton>
<RadioButton Content="历史"
       GroupName="course"
        Margin="140,0"
        FontSize="20"
        Foreground="Blue"
        VerticalAlignment="Top"
       HorizontalAlignment="Left" ></RadioButton>
<RadioButton Content="外语"
       GroupName="course"
       Margin="210,0"
        FontSize="20"
        Foreground="Blue"
        VerticalAlignment="Top"
        HorizontalAlignment="Left" ></RadioButton>
```

CheckBox演示

前台:

后台:

```
private void Button1_Click(object sender, RoutedEventArgs e)
{
    UIElementCollection children = gridMain.Children;
    StringBuilder sbf = new StringBuilder("我的选课为: ");
    foreach (UIElement item in children)
    {
        if(item is CheckBox && (item as CheckBox).IsChecked.Value)
        {
            sbf.Append((item as CheckBox).Content + ",");
        }
    }
    MessageBox.Show(sbf.ToString());
}
```

.Effect有什么用?

```
<TextBlock FontSize="60" FontFamily="Kaiti"
Text="{Binding Restaurant.Name, StringFormat=欢迎光临-\{0\}}" />
```
